| Project Name | Heart Disease Analysis |
| Maximum Marks | 2 Marks |

**Problem – Solution Fit Template:**

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps healthcare innovators
and researchers identify behavioral patterns and recognize what would work and why.

**Purpose:**

☐ Solve complex health problems in a way that fits the needs of patients and doctors.
☐ Succeed faster and increase adoption by using familiar digital health platforms.
☐ Sharpen communication with clear risk scores and visual reports.
☐ Increase trust by solving urgent, costly health issues like heart disease.
☐ Understand the existing situation in order to improve it for the target group.

- ❑ **Understand the existing situation in order to improve it for your target group.**

| Element | Details |
|---|---|
| **Target Customer** | Patients at risk of heart disease, doctors, and healthcare researchers |
| **Observed Problem** | Difficulty in assessing heart disease risk due to scattered medical data and lack of clear visualization |
| **Why It's a Problem** | Patients and doctors must manually interpret lab results and health records, leading to confusion, delays, and missed early interventions |
| **Your Solution** | A comprehensive dashboard that collects patient health data, calculates risk scores, and visualizes results with charts and reports |
| **Why It Works** | Centralizes insights with clear visuals, filters, and secure doctor access — making risk assessment quicker and easier |

| | |
|---|---|
| **How You Validate Fit** | Tested with patient datasets and reviewed by medical professionals; dashboards clarified risk levels and improved decision-makin |
