| Date | 08 March 2026 |
| Team ID | Abhay Nayakwdi, Prajwal Kotgonda,<br>Rohan Pawar, Sourav Kadam |
| Project Name | Heart Disease Analysis |
| Maximum Marks | 2 Marks |

**Proposed Solution Template:**

| S.No. | Parameter | Description |
|---|---|---|
| 1. | Problem Statement (Problem to be solved) | Patients and doctors face difficulty in assessing heart disease risk due to scattered medical data, lack of centralized visualization, and delayed diagnosis. |
| 2. | Idea / Solution description | Develop a digital dashboard that collects patient health data (age, BP, cholesterol, lifestyle), calculates risk scores using predictive models, and visualizes results with charts and reports for patients and doctors. |
| 3. | Novelty / Uniqueness | Combines predictive analytics with interactive visualization, enabling both patients and healthcare providers to quickly interpret risk levels and trends. |
| 4. | Social Impact / Customer Satisfaction | Helps in early detection of heart disease, improves patient awareness, supports doctors in decision-making, and reduces healthcare costs by preventing late-stage complications. |
| 5. | Business Model (Revenue Model) | Subscription-based model for hospitals and clinics; free basic version for patients with premium features (detailed reports, lifestyle tracking) available at low cost. |
| 6. | Scalability of the Solution | Can be expanded to include additional datasets (ECG, genetic data, wearable device inputs) and adapted for other chronic diseases like diabetes or hypertension. |
